

Post-Doc position in  
Organic Chemistry  
(non-permanent position for two years)

A post-doc position is offered for two years at the Institute of Organic Chemistry of the Technische Universität Braunschweig, Germany, in the research group of Prof. Schulz. This is a non-permanent research position for two years without possibility for extension.

The project aims at the identification and synthesis of pheromones, semiochemicals and lipids of tropical butterflies that are part of so called mimicry rings. The project is funded by the German Science Foundation (DFG) and will be performed in close cooperation with partners from European and South American Universities.

The candidate should hold a PhD in Chemistry or a similar subject. She or he should have experience in the synthesis of pheromones or lipids and also in analytical chemistry using GC/MS. Furthermore, the willingness to collect butterflies in the field in South America should be there. The project start is planned for February 1st, 2019.

The payment is according to EG 13 TV-L if the personal requirements are fulfilled.

The Technische Universität Braunschweig is striving to achieve equal opportunity according to the NGG. Applications of females are especially welcome. Disabled people will be employed if equally qualified. People of all nations can apply.

Costs arising from application cannot be refunded. Personal data will be stored if needed for the application process.

Please send applications per Email directly to Prof. Stefan Schulz ([stefan.schulz@tu-bs.de](mailto:stefan.schulz@tu-bs.de)). Please send only one pdf file including all necessary forms (letter, final grade certificates, curriculum vitae, publications, ...).
