

New analytical chemist/chemical ecologist employee to R&D at Nattaro Labs.

Nattaro Labs is a research- and development company with innovative products and sustainable solutions in the fight against the increasing problem of bed bugs both locally and globally.

At the moment, the company is in an expansive phase growing our international presence and we need reinforcement in our research and development projects. The ideal candidate is a person with skills in both biology and analytical chemistry. We hope you have high ambitions and wish to play an important part in our long-term development, yet in a growing innovative team you also need to be willing to work hard outside your primary competence after due training.

The work includes amongst other things:

- improvement of current products and development of new products either in-house or in collaboration with external partners
- handling our bed bug culture including laboratory and field work with bed bugs
- onsite production and product quality control

Qualifications:

You should have a firm knowledge of analytical chemistry in combination with or alternatively chemical ecology/biology. Knowledge of GC-MS analyses and insect electrophysiology are advantageous.

You will be an important member of our R&D team at Nattaro Labs' headquarters located at Medicin Village, Lund. At present, we are nine employees plus a couple of consultants working with the company on a regular basis. The position is a full-time employment and will begin from 2022-04-01.

For more information and to leave your application, please contact Hans Gredeby (tel. 0733-64 42 06, hans@nattarolabs.com) or Jette Knudsen (tel. 0730-206023, jette@nattarolabs.com).
